Edison later changed the paper to a metal cylinder with tin foil wrapped around it. The machine had two diaphragm-and-needle units, one for recording, and one for playback. When one would speak into a mouthpiece, the sound vibrations would be indented onto the cylinder by the recording needle in a vertical (or hill and dale) groove pattern.

From Tinfoil to Stereo, the fundamental reference book of sound recording history, was last available in print in the late 1970s. It described the development of sound recording from early experiments that led to the invention of the tinfoil cylinder phonograph by Thomas Alva Edison in 1877 (patented on February 19, 1878) to the development of stereo technology in the mid-1950s.
